

February 2027 Is Not a Suggestion

The EU Battery Regulation Digital Product Passport requirement takes effect February 18, 2027. There is no opt-out. There is no grace period for companies that started late. Every battery-containing product placed on the EU market must carry a machine-readable DPP with traceable supply chain data, verified carbon footprint attestations, and lifecycle documentation. Noncompliant products cannot be sold.

The three options in front of most compliance teams right now: (1) engage a Big Four firm — 18-month timeline, \$5–15M total cost, deadline likely missed; (2) build it internally — 6–12 months minimum, requires 3–5 compliance engineers the market doesn't have available; (3) SOCIIL.

THE WAVE

The EU Battery Regulation is the first in a wave of mandatory DPP frameworks. ESPR follows, extending requirements to textiles, electronics, and construction products through 2030. The enforcement mechanism is import control — noncompliant products do not clear customs. Companies with structured data work underway by Q3 2026 can meet the deadline. Companies that begin in Q4 cannot.

WHAT SOCIIL DOES

- **Builds and maintains the DPP record for each product.**
Passport Builder maps supply chain data, carbon attestations, and lifecycle documentation to the regulation's schema automatically.
- **Monitors compliance status against tightening thresholds.**
Lifecycle Monitor flags when an attestation nears its validity window or a regulatory update affects an existing record.
- **Maintains an append-only audit trail.** A 2025 attestation cannot be retroactively changed when the regulation tightens in 2027. Anchored to the Base blockchain by default.
- **Handles supply chain tracing and registry submission in one workflow.** Supply Chain Tracer and Registry Manager run concurrently.

WHAT YOU'RE PAYING NOW VS. SOCIIL

WHAT YOU PAY NOW	SOCIIL
McKinsey/Big Four assessment	\$200–900/month all-in
Implementation engagement (\$3–10M)	Included
Internal compliance team (3–5 FTEs)	Same 2-person team, same output

Timeline: 12–18 months, deadline risk high

On track for Feb 2027 if started now

BEFORE

A 2-person team manually building DPP records for a 50-SKU catalog across three disconnected tools.

AFTER

Same 2-person team. Passport Builder handles the catalog. Alex monitors all deadlines automatically.

WORKERS IN THIS DEPLOYMENT

WORKER	RECORD TYPE
DPP Compliance	dpp-compliance-report/v1
Passport Builder	dpp-passport/v1
Supply Chain Tracer	supply-chain-bundle/v1
Registry Manager	registry-record/v1
Lifecycle Monitor	lifecycle-alert/v1

Shopify app and API connector: Q3 2026 roadmap.

"I manufacture lithium batteries and I need to know which products need a DPP before February."

Alex reviews the catalog against the regulation's scope criteria and returns a compliance checklist ranked by urgency — before you have opened a spreadsheet.

Active pilot with Volta Advisory, a compliance consulting firm guiding a medical device manufacturer's EU Battery Regulation program. If your catalog includes battery-containing products sold in the EU and you need to be compliant by February 2027, the scoping conversation takes 30 minutes.
