

The Teacher Shortage Isn't Going Away. The Administrative Burden Can.

A teacher spends 10–15 hours a week on tasks that have nothing to do with teaching — IEP paperwork, parent communication, assessment assembly, attendance tracking. Approximately 50% of new teachers leave the profession within five years, and when researchers ask why, the most common answer is not pay. It's workload.

Meanwhile, personalized tutoring — the single intervention with the strongest evidence base for improving student outcomes — remains available only to families who can afford \$50 to \$150 an hour. A student's zip code, not their potential, determines whether they get it.

THE WAVE

AI is already in every classroom, governed or not. Detection tools are almost entirely ineffective — a 2024 Stanford study found detection software misidentifies human-written text at rates between 12% and 60%. The question is not whether AI will be used. It's whether it's governed. IDEA and ESSA accountability requirements are tightening every year, and most schools' documentation infrastructure — a district SIS, a binder, institutional memory — cannot survive the scrutiny that's coming.

WHAT SOCIII DOES

- **Runs adaptive AI tutoring for every student.** Targeted practice material generated at any hour, at \$5/student/month — the same personalized tutor regardless of household income.
 - **Drafts parent communication from the actual student record.** No starting from scratch, no pulling grades and attendance from three systems.
- **Tracks IEP accommodations and flags documentation gaps automatically,** before they become compliance findings at a due process hearing.
 - **Monitors attendance and performance patterns across every student simultaneously,** surfacing at-risk students before the problem compounds.

WHAT YOU'RE PAYING NOW VS. SOCIII

WHAT SCHOOLS PAY TODAY	SOCIII
Private tutoring (\$50–150/hr, family-funded)	\$5/student/month
Per-student test prep platforms (\$200–400/student/yr)	Included in Tutor worker
IEP coordination overhead (15–20% of coordinator time)	Alex automates documentation
500-student school: ~\$100,000/year (test prep alone)	\$31,188/year (SOCIII, all-in)

BEFORE

A teacher spends 40% of their time on documentation and communication — roughly 12 hours a week that were supposed to go to students.

AFTER

Alex handles documentation, drafts communications, and flags at-risk students continuously. Those 12 hours go back to teaching.

WORKERS IN THIS DEPLOYMENT

WORKER	RECORD TYPE
Tutor	tutoring-session/v1
Student Records	student-record/v1
Course Manager	course-record/v1
Comms	comms-bundle/v1
Alex — Chief of Staff	At-risk monitor, documentation tracker

SOCIII pricing: \$99/month base plus \$5/active student. A classroom pilot of 30 students runs \$249/month; a school of 500 runs \$2,599/month.

"I have 28 fifth-graders. Three of them are reading two grade levels below. Show me which ones haven't had a tutoring session this week."

Alex pulls it immediately from the live student record — not a month-end report, but the continuous data the platform maintains as students learn.

SOCIII's architecture is proven in nursing education, where documentation standards are higher than any other education context. Active pilots in progress for K-12 and post-secondary programs.
