

Title Operations Have a Coordination Problem. It Gets Worse Every Year.

The US title industry pays out hundreds of millions in claims annually. A significant portion traces back not to fraud or legal error — but to process failure: missed deadlines, overlooked encumbrances, documents that fell through the gap between five disconnected tools. Your closers are not careless. They are managing 5–7 active files across software that was never designed to work together, tracking deadlines from memory and email, and rebuilding audit files from paper when something goes wrong.

THE WAVE

Title company consolidation is accelerating. The operations that scale past 20 orders per closer will not do it by hiring more staff. They will do it by solving the coordination problem that currently caps every closer at 5–7 active files. The window to build that infrastructure before the consolidation wave reaches your market is now.

WHAT SOCIII DOES

- **Tracks every active order in one place.** Alex monitors deadlines across all open files and flags anything at risk before you ask.
- **Maintains an append-only record of every action.** Every document, status change, and communication is logged chronologically and cannot be altered — that record is your audit file.
- **Runs title search and chain-of-title analysis** against the underlying parcel record. Encumbrances, easements, and ownership gaps surface automatically.
- **Coordinates across workers in parallel.** Land use, zoning, and escrow checks run concurrently — not sequentially.

WHAT YOU'RE PAYING NOW VS. SOCIII

WHAT YOU PAY NOW	SOCIII
2 closers + 1 admin coordinator	\$99–499/month
CoStar or equivalent data subscription	Included
Manual deadline tracking (~20% of closer time)	Alex handles this automatically
Audit reconstruction from paper (4–8 hrs/file)	Automatic — the record is always current
BEFORE 1 closer manages 3–5 active orders before coordination overhead degrades quality.	AFTER 1 closer manages 10+ active orders. Alex handles the coordination layer.

WORKERS IN THIS DEPLOYMENT

WORKER	RECORD TYPE
Title Search	chain-of-title/v1
Escrow Coordinator	Escrow event ledger
Land Use / Zoning	land-use-bundle/v1
Alex — Chief of Staff	Deadline monitor, next-action drafter

"I'm a title agent in Henderson County TX. I have three active orders. Help me track them."

Alex pulls all three files, surfaces the next deadline on each, and drafts the next-action item for each order — without being asked which deadlines matter or where to look. You review. You approve. Nothing commits until you do.

Pilot deployment with a regional title operation is targeted for Q3 2026. If you run 20 or more orders per month, the conversation takes 30 minutes.
